Architectural Facades

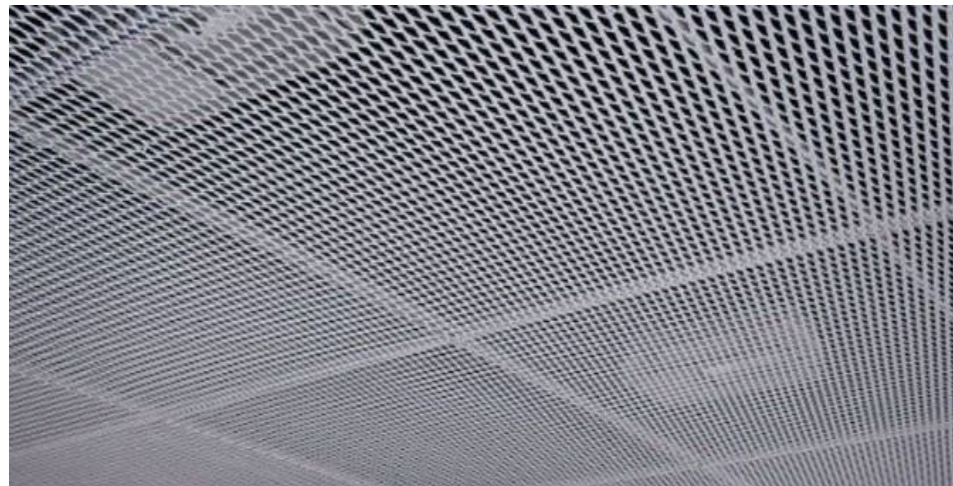

Our architectural meshes give freedom to contemporary design and are extremely versatile for it. The combination across interior and exterior architectural projects are currently sustainable. Our expertise and experience in building brands, architecture means our nets, in addition to the recent prestigious, many historical landmarks, have been included in the building projects. The mesh needs to be combined to create interesting visual effects.

It is easy to understand that every architectural project is very important to us in its needs and opportunities.

With the dedicated known specification we will ensure that you receive the information and guidance are needed to create the effect of your will.

False Ceiling

Today, no official court or commercial premises can be imagined without a false ceiling. The expanded metal ceiling with this particular character allows the expanded metal fabrication process, which provides a free or limited view into the roof cavity as per the requirements of the customer?

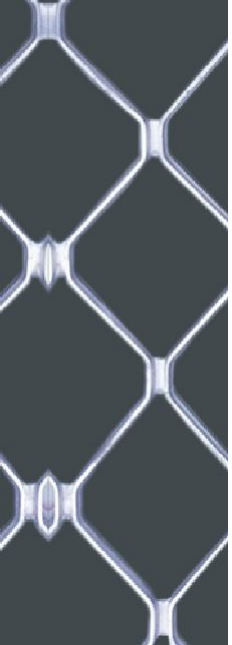

The ceiling can illuminate the space under the expanded metal, for example, we can say the superpower of artificial or natural light. The design can be made when the lights are installed on top of the lattice construction. Bizarre our mesh transformation is capable of creating an inexhaustible spectral surface structure. Rhombus or square mesh, open or closed system, be it our wide spectrum. Gives a different dimension to your premises.

Introduction of metal grill

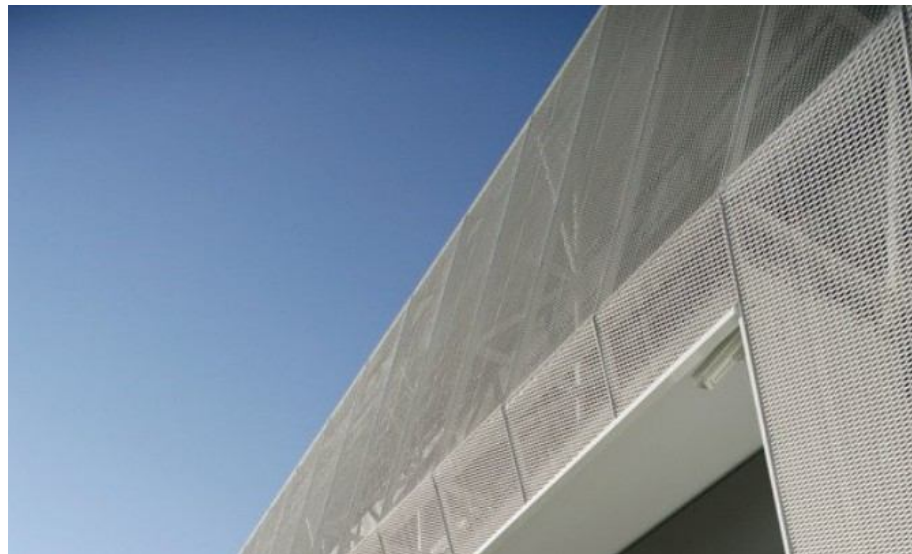

Interior Designs: Commercial & Residential

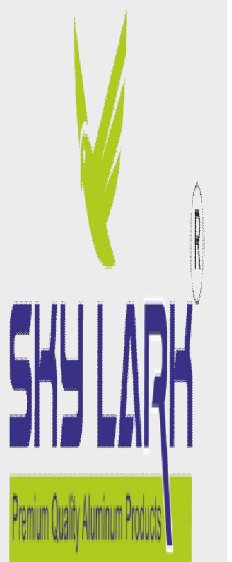

It is important for commercial and residential premises to communicate their image optically. Privacy includes the ability to create fittings and fixtures that blend in with the background. at the same time, the tools need to be strong enough to withst and constant heavy strains.inter-industrial and residential trends towards transparency and openness.the only preferred choice for modern architectural systems is expanded metal.

Sun Screen & Wind Protection Lattices

We built a sun protection system with slots made of expanded metal that made it easier. Multiple uses: During the day, heat insulation, sun protection and last but not least. the innumerable individual domes that are formed during the expansion metal functions as numerous sun protection slats. individual slats will appear at nearby times. transparent from all sides: From outside or inside, transparent from all sides. air protection slots cannot meet the strictest safety requirements related to safety. building against people, vehicles and jet streams, but prevents damage to aircraft caused by the reverse transformation of the jet stream. air protection lattices are made to suit individual needs Site. a particularly strong argument for a combination of transparency and reliable protection for this application.

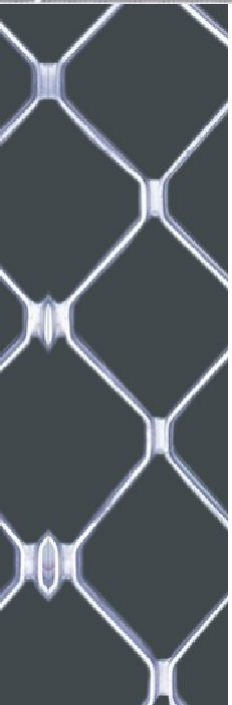

Introduction of metal grill

Balcony And Window Guards

They provide reliable maintenance-free protection against vandalism, forced entry and accidents. breakdown These guards protect your window and building as well as your child's fall protection. Suitable for playgrounds, ball fields, low roof failures and areas next to downstairs windows. allows full window operation for confined areas in small children where optimal airflow is present.

Fencing and Security Perimeters

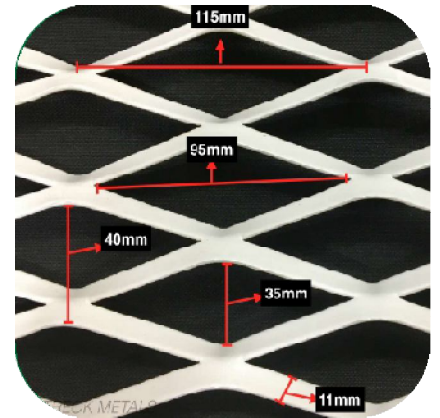

It gives protection to a new character. prevents closeness of mesh opening use of powerful cutting tools. a high number of nodes requires more than three times the time. the number of cuts is one when compared to the aforementioned standard mesh. this mesh of holes of the same size has been tested and adopted by various judicial authorities in Praise for its excellent penetration protection. fencing Design: Choose between open, transparent mesh for fences that allow visitors. close the yard or mesh to ensure prudence. The intelligent design of the net protects you from this. Investigating guests, however, offer adequate transparency to prevent attendance. A closed wall, Large and small nets are available in the open. Stable metal construction additionally offers high resistance against storms and vandalism.

A rectangular product label with rounded ends, set against a dark blue background. The label has a light gray background with a fine grid pattern. At the top center of the label is a smaller version of the yellow bird logo. Below the logo, the text "SKY LARK" is written in a bold, blue, sans-serif font. To the right of "LARK" is a registered trademark symbol (®). Below the brand name, the text "Premium Quality Aluminum Products" is written in a smaller, blue, sans-serif font. A yellow horizontal bar is positioned behind the text "Premium Quality Aluminum Products".
